The screenshot displays the AVG Anti-Virus Free Edition interface. At the top, a green checkmark icon is accompanied by the text "You are protected. All security features are working correctly and are up to date." Below this, a "Security components and status overview" section lists several features, each with a status indicator:

- Anti-Virus: Active
- Anti-Spyware: Active
- LinkScanner: Active
- E-mail Scanner: Active
- Identity Protection: Activate now...
- License: Active
- Resident Shield: Active
- Update Manager: Active

On the right side, there is a blue button labeled "Get complete Internet Security" and a list of features to be added:

- Add Identity Theft protection
- Add complex threat detection

On the left side, there is a navigation menu with "Overview", "Computer scanner", and "Update now". Below the menu, a "Statistics" section provides the following information:

Last scan: 2/2/10, 1:25 PM  
Last update: 2/2/10, 1:40 PM  
Virus DB: 271.1.1/2663  
AVG version: 9.0.733  
License type: Free

At the bottom, there is a section titled "Description of selected component" with the text "Selected component description (no component selected right now)." below it.

There's a core of truth to this Windows gives software far more control over the system than Macs, and that allows malicious code to infect PCs at a much deeper level.. Mac antivirus software isn't often checked by the independent testing labs, but Avast's most recent results were good, with AV Comparative's 2017 test finding the package detected 99.. It's even possible to schedule scans to run automatically when you're not around.. The core antivirus engine offers real-time protection to catch threats when they appear, for instance.. Read on to find out more • Also take a look at the best Mac antivirus software Avast Free Mac Security Avast Free Mac Security goes the extra mile to protect your Mac with an unusually lengthy feature list.. Fortunately, just as on Windows, installing a quality antivirus tool will detect and remove most Mac malware.. PCs are far more at risk from malware, you'll often hear – Macs don't get viruses, and users don't need antivirus software at all.. But that doesn't mean Macs are invulnerable Security vendor Malwarebytes reports that Mac malware has increased dramatically in recent years, with threats now ranging from annoying adware and PUPs (potentially unwanted programs) to ransomware and state-of-the-art back doors which might allow hackers to remotely access and control your computer.. The most lightweight apps run scans on demand only, ensuring they use minimal resources, and they won't make demands on your finances, either – some of the biggest security names around provide very capable products for free. 773a7aa168 [Download Lagu Dragon Force Album](#)
