Installing a generic driver from this website may result in the loss of OEM-customized functionality and other issues.. I would like to add that on some computers (not all, for some reason some it will do it correctly by just doing the 'install/setup' from synaptics), you will have to manually override the installation behavior.. - 1. synaptics pointing device driver
- 2. synaptics pointing device driver windows 10 hp
- 3. synaptics pointing device driver use

No contact email so I couldn't update them of their FAQ inaccuracies and since it took me a day to find this forum now I don't fully remember all the steps.. Go to Device manager, and do a manual search/install of the driver, (including searching for the right driver, which you should have downloaded and put somewhere you can find easily), it will come up with a 'its not a signed driver and windows doesn't recommend' or some such thing, tell it do to it regardless, then restart after it has finished installing.. I find it annoying that synaptics has essentially abdicated their responsibility to the end user (I know that these are OEM devices but the end user will be the one dealing with these things after warranty is over).. NOTE: Before upgrading to Windows 10, first check with your notebook manufacturer for compatibility, then use your device's Windows update function to ensure you get the correct driver for your hardware.
